

AQUARIUM FRESHER

Customer feedback

Customer's conclusion:

I have installed the Aquarium-Fresher in the aquarium in March 2014, in water that was totally infested with algae and dark green and I should mention that I did not change the water prior to installation.“

„And what I see, I could not believe my eyes, with **each passing day** the water became **cleaner and clearer**, and, believe it or not, after 5 days there was **no more algae** to be seen. I had not reckoned with this development at all and I am more than satisfied with it. A really ingenious system, that is working excellently to this day. For me, the aquarium had thus become maintenance-free, since I did not need to change the water with effect from March 2014.“

„I am greatly enjoying my aquarium once again and I can recommend this magnificent system to everyone who has problems with algae formation“

Initial aquarium situation:

- severe algae formation,
- turbid water with a green tint

Situation shortly after using the Aquarium-Fresher:

- reduction in algae formation and water turbidity

Situation after using the Aquarium-Fresher for 5 days:

- no turbidity
- no algae growth
- clean & clear water

Customer: Mr. Kummer, Aquarium size: 240 L

„At the beginning, I was, in fact, a bit sceptical, since I had already tried out several other options in order to have an aquarium without algae. But **I am overjoyed** that I now have the Aquarium-Fresher in my aquarium.“

„I have the following **favourable effects** in my 240 l aquarium thanks to the Aquarium-Fresher:

- Highly proliferating thread algae have died out
- Algae growth on the glass panes has been reduced to a minimum.
- No algae is identifiable on the plants.
- Now, there is only very little algae at the bottom on the gravel (never removed mechanically)
- Vigorous plant growth – The plants are feeling well.“

Initial situation: plants with severe algae formation, moderately turbid water

Situation after using the Aquarium-Fresher (3 weeks): Clear water, no growth of algae

Customer: Mr. Pfeifer (Pfeifer Aquaristics), Aquarium size: 60-500 L

Customer's conclusion:

„I have the Aquarium-Fresher since 2012 in use at my shop. The **functionality of this system really convinced me 100%**. In the meantime, I am an enthusiastic fan of this system and I recommend it to each of my customers.“

„For my aquaria at the shop, but even for the aquaria that I am looking after for my customers such as, for example, the pharmacist in Niklasdorf, I am using the Aquarium-Fresher for aquaria with a size of 60-500 l.“

„Since the time that I am using the Aquarium-Fresher I have **no algae formation** in the aquarium and **crystal clear water at all times**. Moreover, I am observing that my fishes develop better as a result and the residue film has been virtually removed.“

Initial situation: Severe formation of algae on the plants and on the glass

Situation after using the Aquarium-Fresher: No algae formation on plants and on the glass

Customer: Mr. Widhalm, Aquarium size: 120 L

Customer's conclusion:

„Until the time that we used the Aquarium-Fresher, we were unable to control the nuisance of algae in our aquarium. Even using algae removers could not solve the problem. We even tried out different filter materials. All without success.“

„Since the time that I am using the Aquarium-Fresher I have **no more algae formation** in the aquarium and **clean and clear water** at all times. **My wife and I are absolutely delighted to have a perfect aquarium after a long time.**“

Initial situation: severe algae formation on plants and decorative articles

Situation after using the Aquarium-Fresher: no algae formation in the whole aquarium
